# Shipping

You can create shipments from orders, and it is possible to create multiple shipments from a single order. A [shipment](#) represents a grouping of order line items that you can ship to a customer.

The V2 Shipping API allows you to manage shipping zones, shipping methods, and shipping carrier connections.

The Order Shipments resource creates a shipment for an order. You can specify the shipping provider, tracking number, and shipping address ID when creating a shipment.

## Checkout APIs

The [REST Storefront](#), [GraphQL Storefront](#), and [REST Management](#) APIs provide methods for managing a checkout up until the point when you finalized it into an order. Because you can only create shipments from finalized orders, you cannot create a shipment from Checkout API endpoints.

However, all of the listed APIs provide methods for creating a consignment that specifies the line items that should ship to a particular address. Creating a consignment corresponds with the actions that a shopper might take when filling out the storefront checkout page and assigning the items in their basket to their respective shipping destinations.

A checkout will always have one consignment assigned to it, which is the first shipping address. A consignment supports multiple shipping addresses, with each address having its own line items.

## Order shipping addresses

The [Order Shipping Addresses](#) endpoint allows you to view the shipping addresses on an order. An order can have more than one shipping address.

## Shipping zone and shipping methods

You can configure [shipping zones](#) in the control panel or use the API to designate where a merchant ships their products and with which [shipping methods](#) should be available in each geographic region.

An example of a shipping zone might be North America. Within that shipping zone, the shipping methods might be Free Shipping, Ship-by-Weight, and USPS.

## Real-time carriers

BigCommerce offers native integrations with many real-time shipping carriers such as UPS, FedEx, and USPS. The [Shipping Carrier Connection](#) resource allows you to connect an account for one of our natively supported shipping carrier integrations.

For a list of all supported carriers, see [Real-Time Quote Providers](#).
